KIRIGO KIPNGENO

Nakuru, Kenya | +254 115 532 544 | kipngenokirigo@gmail.com |

PROFESSIONAL SUMMARY

Detail-oriented Information and Communication Technology Management (ICTM) graduate with a Second-Class Upper Division degree and a specialized technical foundation in data privacy, risk mitigation, and information governance. Certified by Cisco in CyberOps and Network Security, with practical experience designing secure database architectures and executing systems risk assessments at the University of Nairobi. Highly skilled in writing technical standard operating procedures (SOPs), ensuring compliance with data security frameworks, and organizing data with advanced Microsoft Excel tracking. Eager to leverage technical expertise to protect participant privacy, mitigate AI bias, and build secure data governance frameworks for the FemDigiNomics Project.

TECHNICAL & GOVERNANCE SKILLS

- **Data Governance & Security:** Data Privacy Frameworks, Risk Mitigation, Compliance Auditing, Information Security Policies, Informed Consent Workflows.
- **Core IT & Systems:** System Administration, Database Management, Technical Documentation, IT Support, Systems Integration.
- **Software & Tools:** Microsoft Excel (Advanced Data Architecture), Word, PowerPoint, Outlook, SQL Database Querying, Technical Flowcharts.
- **Network Security Tools:** Wireshark, Nmap, Kali Linux, Metasploit, VirtualBox.

EDUCATION

Maseno University, Kenya
Bachelor of Science in Information and Communication Technology Management (ICTM)

- **Graduation Date:** 14 November 2025
- **Classification:** Second Class Honors (Upper Division)
- **Core Modules:** Computer Networks, Information Systems Security, Database Management Systems, System Administration, and Project Management.

PROFESSIONAL CERTIFICATIONS

- **Cisco CyberOps Associate** – Cisco Systems

- **Cisco Network Security Certification** – Cisco Systems
- **Ethical Hacking Certification**

PROFESSIONAL EXPERIENCE

Developer (Technical Support & Data Documentation)
University of Nairobi (May 2024 — August 2024)

- Conducted structured system risk assessments and drafted formal technical security policies for newly deployed web integrations.
- Documented step-by-step standard operating procedures (SOPs) and project lifecycle guidelines to maintain data compliance.
- Managed secure data entry pipelines and updated relational database tables using SQL querying to ensure structural data integrity.
- Designed and integrated secure API layers, including Safaricom's M-Pesa API, applying strict data-in-transit encryption controls.
- Utilized advanced Microsoft Excel frameworks to track project inventory resources, audit system access logs, and generate compliance metrics.
- Facilitated cross-functional communication between technical engineers, project managers, and community stakeholders.

TECHNICAL PROJECTS

- **Data Auditing & Network Vulnerability Lab**
    - Constructed a virtualized sandbox network utilizing VirtualBox and Kali Linux to evaluate system exposures.
    - Conducted systematic network discovery and packet sniffing using Wireshark and Nmap, creating detailed structural data analysis reports.
- **Secure Enterprise Application Architecture**
    - Programmed a secure web platform deploying OWASP Top 10 security controls, ensuring user authorization boundaries and data leakage prevention.
